Gemserve

# INDUSTRIAL RISK ASSESSMENT

---

## AS INDUSTRIAL AND CONNECTED ENVIRONMENTS TAKE ADVANTAGE OF NEW TECHNOLOGIES, PROCESSES, AND GREATER CONNECTIVITY, THE LIKELIHOOD OF A CYBER INCIDENT INCREASES – PUTTING ORGANISATIONS AT RISK OF SIGNIFICANT FINANCIAL, REPUTATIONAL, SAFETY AND OPERATIONAL DAMAGE.

Gemserv's in depth and scalable industrial risk assessment informs organisations objectively and comprehensively of the risk to their critical processes and environments. Gemserv consultants have extensive experience of assessing cyber security risk across a wide range of critical organisations, environments and sectors, helping businesses to understand and quantify their risks, identify and prioritise mitigations and increasing overall resilience.

Gemserv's Industrial Risk Assessment for operational and industrial environments enables organisations to address immediate and critical risks, whilst also supporting the development and implementation of a cyber security strategy to improve overall resilience and security. We deliver this service to organisations across the Health, Transport, and Manufacturing sector, as well as Critical National Infrastructure Operators.

Organisations benefit from actionable, understandable, and crucial insights into the risks that can affect critical processes, connected environments, and business.

### KEY BENEFITS

- Identification, understanding, and quantification of risks in your critical environments.
- Prioritisation of effective cyber security spending and investments.
- Prevention of operational downtime by addressing cyber security risks.
- Support for the secure future deployment and use of SMART and IoT technologies.

### DELIVERABLES

Deliverables include:

- A concise summary with an executive analysis of the critical risks
- A detailed report of key findings and observations from the documentation review, interviews and site visit
- Presentation of findings to stakeholders
