Security

Discussing Shannon's theory of communication in the presence of noise and its relevance to information security.

Why You Should be Giving This Talk

09/2023

Encouraging newcomers and potential speakers to take the stage at community events for their first public speech.

TESTIMONIALS

Scott McGready

I've known James in a professional capacity for a good few years now and have yet to find something that founders him. A true professional, in all senses of the word. James' talks often go down incredibly well at meet-ups and conferences. I've had the privilege of listening to many of his talks, each one delivered eloquently and with substance – not just hastily thrown together with no real point.

James is a solid speaker you can rely on as a host to deliver excellent content, in an equally excellent manner, captivating the audience and us organisers each and every time.

Graeme Moss

I've had the pleasure of hearing James speak and working with him at many events. His extensive technical knowledge is only surpassed by his passion and enthusiasm for sharing his incisive expertise in a clear, easily understandable manner appropriate to each audience.

Thomas Balin

We invited James to join us on the Real Cyber Talk to share his views about threat modelling, the flaws in CVEs, and the value of vulnerability management. James was able to provide a brilliant combination of genuine insight and esoteric knowledge that's hard to come by. We'd definitely have him back!

John Morrison

James very kindly donated his time to deliver a fascinating 60 min workshop during the 2023 annual Close Protection conference. His workshop was entitled 'A Cyber Security Scenario' - An introduction to Cyber security via a live 'What if scenario'. The workshop demonstrated cutting edge AI and the perils and pitfalls Close Protection Officers must be aware of. The workshop was well received with the audience naturally warming to James personality and evident expert knowledge. If he is free in Nov 2024, I will be for sure asking him to help deliver another fascinating workshop.

PUBLICATIONS

The Cyber Circuit

2024

Security Blend Books

Collecting five years of writing for The Circuit Magazine, the trade magazine of the British Bodyguard Association, The Cyber Circuit covers topics from AI to smart homes and self-driving cars.

Information Security Technologies for Controlling Pandemics

2021

Springer Nature

Contributed chapter on Privacy and Security Implications of the Coronavirus Pandemic.

97 Things Every Information Security Professional Should Know

2021

O'Reilly Media

A collection of advice from a range of information security professionals for newcomers and experienced professionals in the field.

Cyber Defence in the Age of AI, Smart Societies and Augmented Humanity

2019

Springer Nature

Contributed chapter on Insider Threat.
